

## PRODUCT DETAILS

The 6m XL flat pack store is a great alternative to a **traditional 20ft shipping container**, designed specifically to achieve the same space and made of galvanised steel rather than corten steel.

They offer a cost-effective solution to the more expensive shipping container. These stores are specifically designed to give the same storage capacity as a 20ft shipping container but with the added benefits and flexibility of our flat pack storage range.

These units are a great solution to the challenge of tight or restricted site access, underground car parks, or residential properties. The XL badge means it's taller and wider than the standard flat pack store range.

Another major benefit of these 6m XL stores is that they can be linked end on end or side by side to create a larger open-plan storage space to suit your requirements.

Our 6m XL stores are usually delivered by HIAB in flat pack form, but other delivery methods including an already-built solution can be offered, which our team of experts would be very happy to discuss with you. We also offer a delivery and installation service, but this is priced separately and will require a site survey beforehand.

Due to the size of our 6m XL store, they do take a little more planning and person-power to build, although the method is very similar to our 2m, 3m and 4m flat pack store options. We recommend a small team of people for placing the roof section.
