

DRY STICK

Quickfind Code: 1031
Part Number: DRY STICKS

£24.00 (exc. VAT)

£28.80 (inc. VAT)

PRODUCT DETAILS

Dry sticks help to protect the contents of your container, especially textiles and electrical items, from dampness and typically last 6-12 weeks depending on conditions.

A dry stick works effectively as a **shipping container moisture absorber**, reducing condensation inside the container. Each stick store up to 2 litres of water in a moisture protected membrane which prevents the moisture re-entering the container.

Designed with a hook to hang them from the standard container roof mounted lashing points, the dry sticks fit snugly between the wall corrugations.

Please note that typically we recommend using 2 x dry sticks per 10ft length but this will depend on what you are storing and how often you enter the container. We usually recommend that you tape up the standard container vents to reduce the ingress of further moisture from outside. You will need to check dry sticks on a regular basis.

For a longer term solution please also look at Grafotherm coating if the contents you are planning to store are susceptible to moisture.
