Part Number: SALE TOWABLE TOILET UNIT 2+2

£38,000.00 (exc. VAT)

£45,600.00 (inc. VAT)

PRODUCT DETAILS

This twin axle towable 2+2 toilet unit is built to an exceptionally high specification and standard, with 14mm white plygloss GRP panels that look fantastic inside and out, whilst being robust and exceptionally easy to clean.

The polyflor platinum oak vinyl floor covering protects the unit from any moisture ingress and is easy to clean. The unit is ideal for weddings and outdoor event hire, use by the film industry or for temporary needs within the construction industry.

The interior features warm-white LED downlights, white vanity tops with 350mm glass bowl sinks and chrome sensor operated taps (hot water is supplied to taps via a 5ltr water boiler in service area). A large mirror behind each vanity has LED colour changing lighting back lit to the mirror for customising to your style or event.

Cubicle panels in SGL 13mm wenge colour range separate the handwashing area and toilets, the cubicle doors have locks with in-use indicators and external emergency releases. Toilets are ceramic back to wall with concealed flush tanks and soft close seats.

The unit requires connection to a 230V power supply via mains or generator. Electrical connection is made via a 16A plug, with a current draw of 10A.

Access to the unit is via strong but lightweight aluminium steps (with stainless steel handrails), which connect neatly and easily to the A frame during transport.

A completely separate door on the reverse of the toilet block provides access to all the plumbing and electrical services – this minimises disruption caused to users during use or at an event.

The unit is designed to provide every option to maximise operational flexibility. Fresh water can be supplied via the 350 litre holding tank, or if available on site mains water can be connected to the mains via a simple connection in the service area. The waste can be piped directly into a sewage system via a 3" brass gate valve connection.
